

HEAT EXCHANGERS

HONIRON Heat Exchangers are custom built in a wide range of sizes for a variety of uses. These are high quality units incorporating the best materials and latest technical designs and features. The design is carried out on specifically designed computer software and the fabrication is conducted under strict guidelines and supervision by a qualified and experienced engineering and design staff to ensure trouble free service from the equipment.

HONIRON heat exchangers find applications in many different industries such as refineries, chemical, petrochemical, pulp and paper, carbon black and edible oils.
