

Continuous Vertical Crystallizer

ADVANTAGES

- Long term uniform contact in cooling vessel maximizes crystal growth.
- Vertical design allows for use in limited space.
- Special distribution system aids in the prevention of masecuite channeling.
- All units are pre-erected and pre-tested prior to field erection.
- Crystallizers are offered with either flat or dished bottom.
- Can run in series or parallel with other crystallizers.
- Currently have installations in raw cane sugar factories, cane refineries and beet sugar factories.
- Full or partial automation available upon request.
